Lack of Unity of Invention

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-7 and 16-20, drawn to processes for making N-aryl and N-alkenyl- γ -amino acids and esters.

Group II, claims 8-15, drawn to N-aryl and N-alkenyl- γ -amino acids.

Group III, claims 21-30, drawn to processes for making 2,3-dihydroazepines and 2,3-dihydrobenzazepines.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Compounds made by the processes of claims 1-7 in Group I and the processes of claims 16-20 in Group I, which are also compounds of Group II (claims 8-15), and are the starting materials in the processes in Group III (claims 21-30), are known from the prior art.

US 3,632,636 (Wei and Bell) discloses in column one compounds having the following structure:

Art Unit: 1624

where R^1 is hydrogen, halogen, lower alkyl or lower alkoxy;

R^2 is hydrogen, halogen or sulfamoyl;

R^3 is halogen, lower alkyl, lower alkoxy or benzoyl; and

n is an integer from 2 to about 4.

... These are compounds made by processes of claims 1-7, and the compounds employed as starting materials in the processes of claims 16-20, and the compounds claimed in 8-15.

Proctor and Thomson, "Azabenzocycloheptenones. Part II. Dieckmann Cyclisation of Arylamino-esters" Journal of the Chemical Society, pages 2312-2314 (1957) discloses on page 2312 a compound employed as a starting material, "IV" with the following structure:

, which is a compound made by processes of claims 16-20 and also a starting material for the processes of claims 21-30.

The group corresponding to the "electron-withdrawing group," "Y" from compounds in the instant claims is R^3 in Wei and Bell's above-noted general structure which is a halogen or benzoyl, and is the methoxycarbonyl group adjacent to the nitrogen atom in Proctor and Thomson's compound IV.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1624

The examiner has required restriction between product and process claims. If applicant elects claims 8-15, directed to the product, and these product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. **Process claims that depend from or otherwise include all the limitations of the patentable product** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of *In re Ochiai*, *In re Brouwer* and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
